

The **Top-100 Reports** that the Starter and Lite Editions of Gold Finger can generate, on-demand, in real-time, at the touch of a button –

I. **Domain User Account Management Reports** (30 reports)

For each report, each user's *Title*, *Account Status*, *SAM Account Name* and *Distinguished Name*, as well as any relevant time value (e.g. last logon, expiration, creation, deletion or modification date and time) is displayed.

1. All domain user accounts
2. All administrative domain user accounts
3. All active domain user accounts
4. All stale domain user accounts
5. All unused domain user accounts
6. All enabled domain user accounts
7. All disabled domain user accounts
8. All locked domain user accounts
9. All recently created domain user accounts
10. All recently deleted domain user accounts
11. All recently changed domain user accounts
12. All password-protected domain user accounts
13. All smart-card protected domain user accounts
14. All domain-user accounts that do not require passwords to logon
15. All domain user accounts whose password must be changed at next logon
16. All domain-user accounts that do not have an expiration date
17. All domain-user accounts that are about to expire
18. All domain user accounts for which DES encryption types are used
19. All domain user accounts that do not require Kerberos preauthentication
20. All domain user accounts that are sensitive and cannot be delegated
21. All domain user accounts for which Kerberos name mappings are specified
22. All domain user accounts that can logon to any workstation

23. All domain user accounts that can logon anytime
24. All domain user accounts for which specific logon hours have been specified
25. All domain user accounts for which a logon-script is not specified
26. All domain user accounts for which a user-profile is not specified
27. All domain user accounts that do not have a description specified
28. All domain user accounts that do not have an office location specified
29. All domain user accounts that do not have an organizational title specified
30. All domain user accounts that have a photo uploaded

II. Domain Computer Account Management Reports (14 reports)

For each report, each computer's *DNS Name*, *Operating System*, and *Distinguished Name*, as well as any relevant time value (e.g. last logon, creation, deletion or modification date and time) is displayed.

1. All domain computer accounts
2. All active domain computer accounts
3. All stale domain computer accounts
4. All unused domain computer accounts
5. All enabled domain computer accounts
6. All disabled domain computer accounts
7. All recently created domain computer accounts
8. All recently deleted domain computer accounts
9. All recently changed domain computer accounts
10. All domain computer accounts for which Kerberos name mappings are specified
11. All domain computer accounts that are trusted for unconstrained delegation
12. All domain computer accounts for which a manager is not designated
13. All domain computer accounts for which a location is not specified
14. All domain computer accounts for which a description is not specified

III. Domain Security Group Management Reports (12 reports)

For each report, each security group's *Scope*, *Direct Member Count*, *SAM Account Name* and *Distinguished Name*, as well as any relevant time value (e.g. creation, deletion or modification date and time) is displayed.

1. All domain security groups
2. All domain security groups of a specific scope (Builtin Local, Domain Local, Global or Universal)
3. All administrative domain security groups

4. All empty domain security groups
5. All nested domain security groups
6. All domain security groups with large memberships
7. All domain security groups for which a manager is not designated
8. All domain security groups for which a description is not specified
9. All recently created domain security groups
10. All recently deleted domain security groups
11. All recently changed domain security groups
12. All direct members of a security group

IV. Organizational Unit Management Reports (9 reports)

For each report, each organizational unit's *Name*, *Number of Objects Contained* and *Distinguished Name*, as well as any relevant time value (e.g. creation, deletion or modification date and time) is displayed.

1. All organizational units
2. All empty organizational units
3. All recently created organizational units
4. All recently deleted organizational units
5. All recently changed organizational units
6. All organizational units to which group policies are explicitly linked
7. All organizational units to which group policies are not explicitly linked
8. All organizational units for which a manager is not designated
9. All organizational units for which a description is not specified

V. Container Management Reports (6 reports)

For each report, each container's *Name*, *Number of Objects Contained* and *Distinguished Name*, as well as any relevant time value (e.g. creation, deletion or modification date and time) is displayed.

1. All containers
2. All empty containers
3. All recently created containers
4. All recently deleted containers
5. All recently changed containers
6. All containers for which a description is not specified

VI. Group Policy Management Reports (4 reports)

For each report, each group policy container's *Name*, *Display Name*, *Status* and *Distinguished Name*, as well as any relevant time value (e.g. creation, deletion or modification date and time) is displayed.

1. All group policy containers
2. All recently created group policy containers
3. All recently deleted group policy containers
4. All recently changed group policy containers

VII. Service Connection Point Management Reports (7 reports)

For each report, each service connection point's *Name*, *Vendor*, *Service DNS Name* and *Distinguished Name*, as well as any relevant time value (e.g. creation, deletion or modification date and time) is displayed.

1. All service connection points
2. All recently created service connection points
3. All recently deleted service connection points
4. All recently changed service connection points
5. All service connection points for which keywords are specified
6. All service connection points for which DNS service names are specified
7. All service connection points for which service bindings are specified

VIII. Trust Management Reports (8 reports)

For each report, each trust relationship's *Name*, *Status*, *Direction* and *Distinguished Name*, as well as any relevant time value (e.g. creation date and time) is displayed.

1. All trust relationships
2. All recently established trust relationships
3. All enabled trust relationships
4. All external trust relationships
5. All cross-forest trust relationships
6. All transitive trust relationships
7. All trust relationships for which SID filtering is disabled
8. All trust relationships for which Selective Authentication is enabled

IX. Active Directory Security Permissions Management Reports (5 reports)

For each report, each object's *Name*, *Object Type*, *Total ACE Count* (i.e. total number of ACEs that exist in the object's ACL for the specified security principal), and *Distinguished Name* is displayed.

1. All objects on which a security principal has any / allow / deny / explicit / inherited permissions
2. All objects on which a security principal has read/modify permissions / modify owner permissions
3. All objects on which a security principal has read-property / write-property permissions
4. All objects on which a security principal has create-child / delete / delete-child / delete tree permissions
5. All objects on which a security principal has extended right / validated write permissions

X. Microsoft Exchange Mailbox Management (5 reports)

1. All mailbox-enabled or mail-enabled accounts
2. All mail-enabled security and distribution groups
3. All mailbox-enabled or mail-enabled accounts that are hidden from Exchange address lists
4. All mailbox-enabled accounts with Outlook Web Access disabled
5. All mailbox-enabled accounts with Outlook Mobile Access disabled

Report Categories

The Starter and Lite Editions offer **200+** security reports that cover the following IT management categories –

- | | |
|---|---|
| 1. Domain User and Computer Account Management | 4. SCP, Group Policy and Printer Management |
| 2. Domain Security Group Management | 5. Exchange Mailbox and Contact Management |
| 3. Organizational Unit and Container Management | 6. Trust, Schema and AD ACL Management |

Security Reporting Features

The Starter* and Lite Editions offer the following **6** novel security reporting features –

- | | |
|---|--|
| 1. Generate reports on-demand in real-time | 4. Exclude/include objects from specific OUs |
| 2. Focus reports on specific OUs and containers | 5. Generate and print customized reports |
| 3. Export all report results to CSV format | 6. Generate and print summary reports |

* Starter Edition only offers features 1 – 3

Trustworthy Reporting

Gold Finger is developed by Paramount Defenses Inc, a valued Microsoft directory services partner. 100% developed in and supported from within the United States by U.S. citizens only, it is trusted worldwide and endorsed by Microsoft Corporation.
