

# *Gold Finger*

**Active Directory** Access Assessment Suite

*Unrivalled Capability, Value and Trustworthiness*

# Gold Finger

*Gold Finger* is the world's most capable, valuable and trustworthy suite of access assessment tools for Microsoft Active Directory, and is the gold standard for Active Directory Assessment.

The *Gold Finger* Suite is architected by former Microsoft Program Manager for Active Directory Security, endorsed by Microsoft, trusted worldwide, and comprised of 8 specialized tools –

1. Active Directory Security Auditor
2. Active Directory Membership Auditor
3. Active Directory ACL Analyzer
4. Active Directory ACL Exporter
5. Active Directory Permissions Analyzer
6. The world's only accurate Active Directory Effective Permissions Calculator
7. The world's only accurate Active Directory Effective Access Auditor
8. The world's only accurate Active Directory Privileged Access Assessor

Today these tools deliver paramount cyber security insight to organizations worldwide.

Gold Finger's **uniqueness** is in its unrivaled ability to deliver accurate effective permissions and privileged access insight, which are paramount for Active Directory security and cyber security.

# Gold Finger

## *Unrivaled Capability*

*Gold Finger* is quite simply unrivaled in capability because it is the only solution in the world that delivers accurate Active Directory effective permissions based privileged access insights.

Accurate effective permissions insights and accurate privileged access insights based on effective permissions are paramount to Active Directory security and to organizational cyber security.

In addition, Gold Finger also empowers organizations to be able to instantly and effortlessly –

1. Inventory and audit Active Directory
2. Enumerate, audit and document Active Directory groups memberships
3. View and analyze Active Directory access control lists (ACLs and SACLs)
4. Export the ACLs and SACLs of all Active Directory objects in a domain
5. Comprehensively analyze Active Directory permissions domain-wide
7. Calculate Active Directory effective permissions accurately
8. Audit Active Directory effective access accurately
9. Assess Active Directory Privileged Access domain-wide accurately

# Gold Finger

## *Unrivaled Value*

*Gold Finger* can accomplish within minutes what could otherwise easily take months to do, thus delivering unrivaled value and time and cost efficiencies to organizations worldwide.

Specifically, Gold Finger can accurately assess privileged access provisioned on thousands of Active Directory objects, based on accurate effective permissions analysis, within minutes.

The need to be able to accurately determine effective permissions and privileged access in Active Directory is essential and paramount to organizational cyber security today.

The accurate determination of effective permissions in Active Directory, even though essential and paramount, is an extremely arduous, complicated, expertise and time intensive process, and one that is easily prone to error, especially when there is absolutely no room for error.

Organizations require the ability to be able to accurately calculate effective permissions on a large number of Active Directory objects, and do so frequently, given the dynamic state of access in Active Directory, and wherein even a single change in the ACL of a single Active Directory object could instantly impact the security of thousands of Active Directory objects.

Gold Finger fully automates the accurate calculation of effective permissions domain-wide, thereby delivering paramount insight and unrivaled value to organizations worldwide.

## *Unrivaled Trustworthiness*

Gold Finger also sets the gold standard for trustworthiness today, because the security of the tooling used by Active Directory administrators, is as important as the accuracy of their results.

Probably the single most overlooked aspect in all of Active Directory and organizational cyber security today is the trustworthiness of the tooling used by Active Directory administrators.

Active Directory administrators often use a variety of tools to perform administrative tasks and audits, and when they do so, these tools run/operate in the same elevated unrestricted access.

The trustworthiness of tools used by Active Directory administrators is of paramount importance because a single untrustworthy tool or script could easily compromise the entire organization.

At Paramount Defenses, we care as deeply about the security of our tooling as we do about the accuracy of their results, so we go to great lengths to deliver the world's most trustworthy tools.

Gold Finger is the world's only Active Directory tool that is architected by former Microsoft Program Manager for Active Directory Security, endorsed by Microsoft, protected by advanced tampering measures, and 100% developed in and supported by U.S. citizens from within USA.

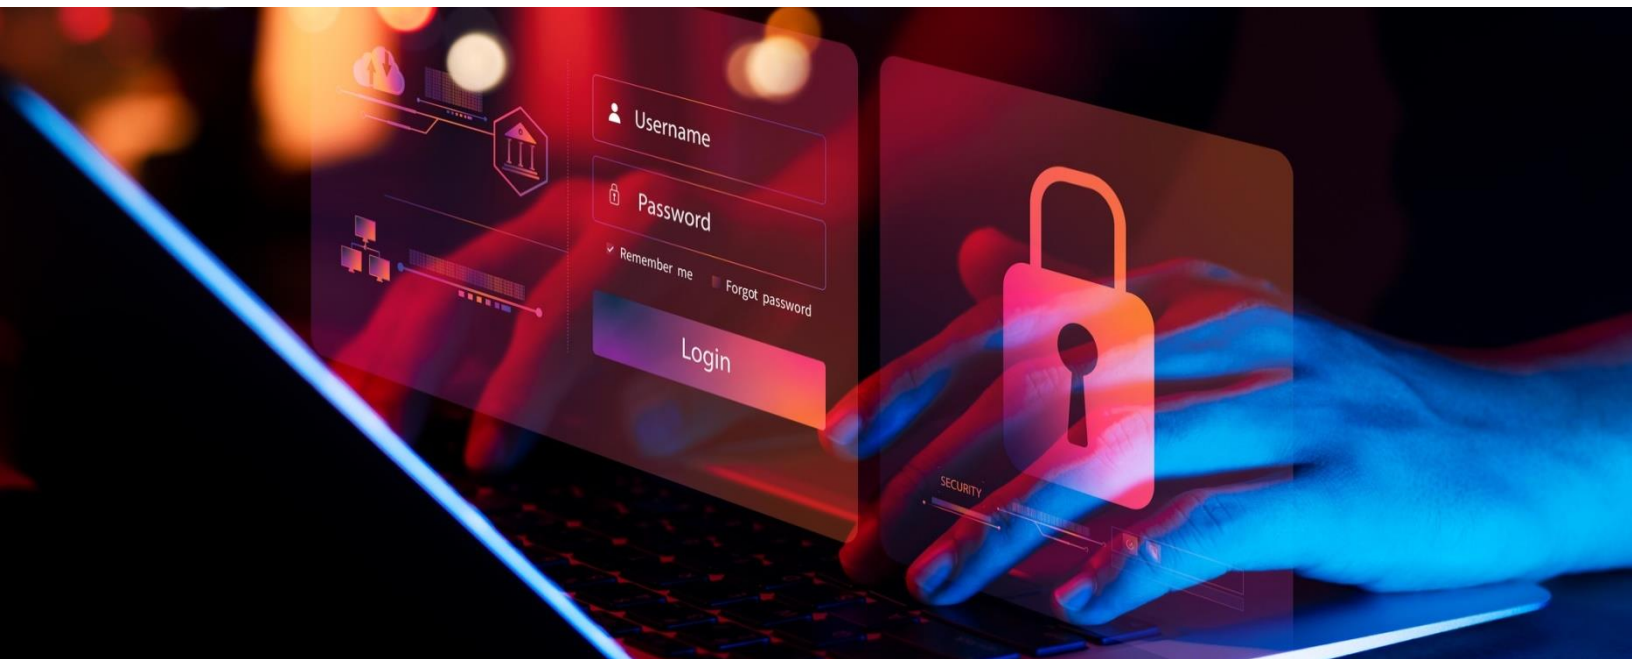

For us, the security of our tooling is as vital as its accuracy, because your security is paramount.
